

Tau Core kernel comparison: simple, projection, morphology-history projection, and baselines

Notes

- Explicit RMOND prediction curves are not present in these point artifacts.
- UGC12506 PH curve is a caveated control replay, not endpoint validation.
- NGC4013 protocol is retrospective/blocker-marked.
- NGC4088 is a single-object caveated warp-history endpoint.
- Curves are compared only where already frozen/scored artifacts exist.
